To whom it may concern:

Since the establishment of 2AM Group, Draexlmaier Automotive has had the opportunity to work with the Quality Engineering, Inspection, Logistics and Supplier Development Teams of 2AM in providing services from containment, inspection, sort and rework and various engineering project managements for both our main customers, BMW and General Motors platforms. They have effectively contained several issues for us that allowed us to eliminate customer concerns and have worked very hard to seek continuous improvement and preventive actions in every measure of our interaction. They continue on a regular basis to play an important role for our current activities with supplied product to the BMW X5 and X6 projects.

2AM associates were found to be knowledgeable of the task, eager to resolve the issue(s), flexible from the start to finish of the project and provided timely reports on a daily basis. It was evident that they were familiar with BMW and other OEM products and it is obvious that 2AM Group had provided these services on other BMW products supplied to them in the past. As a result we are in planning stages for continuation of our relationship to accomplish a successful F25 launch which is very important to DAA.

We hold their professional opinions in high regard and have found that they operate with the highest levels of integrity noticed within this service arena. Therefore, DAA will continue the developing relationship with 2AM Group into the future and consequently feels that they are a good representation of an extension service of BMW as well.

Please do not hesitate to contact me if additional reference information is needed.

Sincerely,

Chip Vogel
VP of Operations - NAI
